

RETINAL EXAMINATION CONSENT
OPTOMAP and DILATION

In order to perform a comprehensive eye examination, the doctor needs to examine the retina to check the health of your eyes. This allows the doctor to detect many eye diseases, such as glaucoma, macular degeneration, early signs of diabetes, arteriosclerosis, high blood pressure and other conditions that may result in loss of vision. Our office now offers **OPTOMAP**, which is an advanced digital retinal exam.

The doctor strongly believes an OPTOMAP Retinal Exam is an essential part of the eye examination. If you choose dilation, you will experience blurred vision and increased sensitivity to light that last for 3-6 hours. I understand the importance of a retinal exam and:

_____ I would like to have **OPTOMAP** (fee based on insurance)

_____ I would like to have **DILATION**

_____ I **DECLINE OPTOMAP and DILATION** and understand that I am releasing Dr. James M. Beranek from any liability.

I have read and understand the above information.
